Abstracts

The global Littrow Prisms market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Littrow prisms are optical components consisting of a right-angle prism with a reflective coating on one of its faces, positioned such that light entering the prism is internally reflected at the coating-prism interface and exits the prism parallel to the incident light direction. This configuration produces a deviation angle of 180 degrees between the incident and exiting light beams, making Littrow prisms useful in various optical setups, including spectrometers, lasers, and wavelength selection applications.

This report studies the global Littrow Prisms production, demand, key manufacturers, and key regions.
