Abstracts

The global Live Feeder Bugs and Insects market size is expected to reach \$ 1467 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Live Feeder Bugs and Insects refer to commercially bred live insects and small arthropods used as feed sources for pets, laboratory animals, aquaculture species, and captive wildlife. These live feed organisms are artificially raised, processed, and supplied to provide natural protein and essential nutrients for animals such as reptiles (lizards, snakes, turtles), amphibians (frogs), ornamental fish, birds, small mammals, and research animals. Common feeder insects include crickets, mealworms, superworms, dubia roaches, silkworms, locusts, and fruit flies. Due to their high protein content, strong palatability, and similarity to natural diets, live feeder insects have become an important category in the exotic pet industry, professional animal breeding, and laboratory research markets.

In 2025, the global Live Feeder Bugs and Insects annual sales volume reached 150,000 metric tons, with an average selling price of US\$6.7 per kilogram. The industry's overall gross profit margin typically ranged between 30% and 50%.
