The global Live Video Content Delivery Network(CDN) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Media Content Delivery Network (CDN) is a system of geographically distributed servers that helps deliver media content, such as images, videos, and audio files, to end users in a fast and efficient manner. CDNs work by storing copies of the media content on servers located in different data centers around the world. When a user requests a piece of media content, the CDN automatically determines the closest server to the user and delivers the content from that server. This reduces latency and ensures fast and reliable delivery of media content, even to users far away from the original server. CDNs are commonly used by websites and online platforms to optimize the performance and user experience of media-rich content.
