Livestock Automatic Feeding System is an automated agricultural equipment system designed to deliver feed to livestock according to preset schedules, quantities, and feeding strategies. The system integrates feed storage, conveying mechanisms, distribution devices, sensors, and control software to improve feeding efficiency, reduce labor costs, and optimize animal growth conditions. It is mainly used in large-scale dairy farms, pig farms, poultry farms, and intelligent livestock breeding facilities. The product boundary includes complete automatic feeding equipment and integrated feeding systems, excluding standalone feeders, feed conveyors, and farm management software.

The livestock automatic feeding system industry chain includes upstream suppliers of motors, sensors, metal structures, control components, conveying parts, and electronic equipment; the midstream sector covers system design, equipment manufacturing, installation integration, and commissioning; the downstream sector includes dairy

farming, pig farming, poultry production, and modern livestock breeding operations. Market growth is driven by agricultural automation, labor cost increases, precision farming development, and demand for efficient livestock production.
