Livestock Farming Cooling System refers to a comprehensive temperature control solution designed for livestock breeding environments. Through mechanical ventilation, evaporative cooling (such as wet curtain-fan system), spray cooling, floor cooling pipes or high-pressure atomization and other technologies, the temperature, humidity and air quality in the livestock house are adjusted to an appropriate range (usually the temperature is controlled at 15-25°C and the relative humidity is 60%-70%) to reduce the impact of heat stress on the growth, reproduction and health of livestock and poultry, while improving feed conversion rate and breeding efficiency, ensuring animal welfare and reducing mortality.
