The global Livestock Scannable Electronic Identification (EID) Tag market size is expected to reach \$ 2798.3 million by 2029, rising at a market growth of 9.4% CAGR during the forecast period (2023-2029).

Smart ear tags build on our years of research into livestock production and long-term sensing and tracking. An ear tag is a plastic or metal object used to identify livestock and other animals. If the ear tag uses radio frequency identification device (RFID) technology, it is called an electronic ear tag. It has geolocation capabilities, improves the traceability and provenance of livestock, and will provide a platform for other possible future applications. Increasing importance of smart ear tags by farmers to track temperature and activity patterns of animals is expected to be a factor driving market growth during the forecast period. Increase in the number of agricultural start-ups in the recent period is also a factor driving the market growth over the forecast period. These startups are focusing on building reliable agricultural technology products to ensure the safety of animals and this factor is estimated to also play a decisive role in the growth of the market. Smart ear tags reduce risk and operational expenses, improve performance and facilitate traceability. Depending on the end of the mark, the mark can be made on one or both ears of the animal. These features of the product are expected to drive the growth of the market over the forecast period.

Livestock scannable electronic identification (EID) tags are electronic devices specially used for animal identification and electronic management. It is an animal electronic ID card that can be automatically recognized. One can easily and automatically identify each individual animal through various types of dedicated readers. Through this electronic ear tag, it can be traced back to the growth data and whereabouts

management data of livestock, and can be linked to production farms, purchase farms, slaughterhouses and even terminal supermarkets.
