Abstracts

The global LLM Observability and RAG Evaluation Platforms market size is expected to reach \$ 2271 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

The LLM observability and RAG evaluation platform is a software solution designed for large language model (LLM) applications, enterprise knowledge-base Q&A systems, and AI agent systems. Through features such as end-to-end invocation chain tracing, prompt and dataset version management, response quality scoring, RAG recall and faithfulness assessment, cost/latency monitoring, and real-time alerts, the platform helps developers detect hallucinations, performance degradation, model drift, and cost anomalies in production environments. Overall, the market is evolving from simple development and debugging tools into infrastructure for enterprise AI application operations and maintenance (AIOps); the combined gross margin for SaaS subscriptions, on-premise deployments, and premium evaluation services is projected to be approximately 60%-80%.
