According to our (Global Info Research) latest study, the global LNG-BOG Helium Extraction System market size was valued at US\$ 73.25 million in 2025 and is forecast to a readjusted size of US\$ 127 million by 2032 with a CAGR of 8.3% during review period.

LNG-BOG helium extraction system is a process device for recovering and extracting helium from liquefied natural gas (LNG) boil-off gas (BOG). Since LNG usually contains trace amounts of helium, the helium concentration increases relatively as LNG evaporates to form BOG. ??The helium extraction system uses precise separation processes, such as cryogenic fractionation or membrane separation technology, to efficiently separate and purify helium from BOG for use in industry, medicine, and scientific research, while optimizing LNG energy utilization efficiency and reducing resource waste.
