## Abstracts

According to our (Global Info Research) latest study, the global LNG Bunkering market size was valued at USD 1039.2 million in 2023 and is forecast to a readjusted size of USD 2094.1 million by 2030 with a CAGR of 10.5% during review period.

Liquefied natural gas (LNG) is natural gas (predominantly methane, CH<sub>4</sub>) that has been converted to liquid form for ease of storage or transport.

LNG is an attractive fuel choice for many vessels because it exceeds the air quality standards set forth. It takes up about 1/600th the volume of natural gas in the gaseous state. It is odorless, colorless, non-toxic and non-corrosive. Hazards include flammability after vaporization into a gaseous state, freezing and asphyxia.

The liquefaction process involves removal of certain components, such as dust, acid gases, helium, water, and heavy hydrocarbons, which could cause difficulty downstream. The natural gas is then condensed into a liquid at close to atmospheric pressure by cooling it to approximately -162 °C (-260 °F); maximum transport pressure is set at around 25 KPa (4 psi).

LNG Bunkering is a particular type of operation where LNG fuel is transferred from a given distribution source to a LNG fuelled ship. It involves the participation of different stakeholders, from the ship-side, LNG supplier, ports, safety personnel, administrations and policy makers. In this report, LNG bunkering only refers to LNG bunkering fuel.

The major players in global LNG Bunkering market include Skangas, Shell (Gasnor), Statoil, etc. The top 3 players occupy about 50% shares of the global market. Europe and Asia-Pacific are main markets, they occupy about 75% of the global market. Truck-

to-Ship is the main type, with a share about 70%. Ferries & OSV is the main application, which holds a share about 40%.
