The LNG gasification pressure regulating skid has the characteristics of small space occupation, good system coordination, complete functions and high reliability, and has a wide range of applications.

The LNG gasification pressure regulating skid is a piece of equipment used for the storage and transportation of liquefied natural gas (LNG). It mainly consists of LNG storage tanks, vaporizers, pressure regulators, etc. The working principle of the LNG gasification pressure regulating skid is to extract liquid natural gas from the storage tank, gasify it through the gasifier, and convert it into gaseous natural gas. Then, the pressure of the gaseous natural gas is regulated through a pressure regulator so that it reaches a pressure suitable for transportation and use. Finally, the gaseous natural gas is transported to the destination through pipeline transportation or gas transportation vehicle transportation.
