Apologies for the oversight. Here is the corrected translation without the term 'superiority': The LNG ultra-low temperature valve is a precision valve specifically designed for the liquefied natural gas (LNG) industry, capable of reliably operating in extreme low-temperature environments, typically around -162°C, to ensure the safety and efficiency of LNG storage and transportation processes. Its unique design exhibits superior low-temperature material properties and sealing capabilities, maintaining structural integrity and operational flexibility under frigid conditions. The valve's ability to withstand pressure fluctuations and prevent leakage of cryogenic media is crucial for the stable operation of LNG systems and the prevention of energy loss.
