According to our (Global Info Research) latest study, the global Load Testing Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Load Testing Machine is a testing device used primarily to determine the strength of materials.

For many of the tests performed in a Load Testing Machine, a test piece is fabricated for the test. Load testing machines typically apply a vertical movement to the specimen in tension, bending, compression, or shear to determine the deformation, elongation, or rupture behavior of the material under load.

Load Testing Machines are also commonly referred to as universal testing machines by some testing equipment manufacturers. Load Testing Machines are mainly used by companies, research institutes, and universities in various industries, including the mining industry.

They are useful for testing the mechanical properties of a wide range of materials, including metals, non-metals, composites, pharmaceuticals, food, wood, copper, aluminum, plastic profiles, wire and cable, paper, film, rubber, and textiles.
