According to our (Global Info Research) latest study, the global Load Weighing Device market size was valued at USD 233.6 million in 2023 and is forecast to a readjusted size of USD 309.8 million by 2030 with a CAGR of 4.1% during review period.

A load weighing device is a system that measures the weight of the passengers and cargo inside the elevator car. The device continuously monitors the weight in the car and compares it to the elevator's maximum capacity. If the weight limit is exceeded, the system can take steps like triggering an alarm, preventing door closure, or even stopping the elevator movement to avoid overloading and potential accidents.
