Loading Dock Shelters & Dock Seals are equipment used in loading docks to create a seal between the truck trailer and the dock, providing a weather-tight and energy-efficient barrier. They help maintain a controlled environment inside the facility, protect against the elements, and enhance worker comfort and safety.

Dock seals are compressible foam pads or curtains installed around the sides and top of the dock door opening. They create a seal around the trailer when it backs into the dock, providing a snug fit to prevent the transfer of outside air, dust, insects, and pests into the facility. Dock seals typically consist of foam-filled side pads and a head pad or curtain that compresses against the trailer, forming a seal. Dock shelters are three-sided enclosures that wrap around the sides and top of the trailer when it is backed into the dock. They provide a more flexible seal than dock seals and are suitable for accommodating a range of trailer heights and widths. Dock shelters often consist of a rigid frame covered with flexible fabric or curtain material that conforms to the shape of the trailer. The fabric extends around the sides and top of the trailer, sealing off the gaps and preventing drafts and weather elements from entering the loading area.
