Loading shuttle table, consisting of several cutting grids, which significantly increases the throughput of CNC cutting machines, as the system allows simultaneous loading, cutting and unloading. The principle of the table is that three shuttle tables rotate in an endless loop: One table is first loaded, then moves into the processing zone and after cutting into the unloading zone – after complete unloading, the table finally moves under the cutting system back into the loading zone. The table size can be configured modularly from 3.0 m in 1.5 m units.
