A locomotive carbon brush refers to a crucial component used in electric locomotives. These brushes are typically made of carbon or graphite materials and serve the purpose of conducting electrical current between stationary and rotating parts of the locomotive's electrical systems. They are designed to withstand high temperatures and friction, ensuring reliable electrical contact and minimal wear over extended periods of use. Carbon brushes play a vital role in transferring electrical power from the locomotive's traction motors to the wheels, enabling the locomotive to move efficiently and smoothly.
