According to our (Global Info Research) latest study, the global Log Washers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The Log Washer cleaning process begins by transferring contaminated materials to a log washer at the lower end of the tub. The counter-rotating paddle conveys the material to the upper outlet of the tub. Impact stress and frictional effects crush the loam and clay-containing elements, allowing them to be distributed in water. The cleaned materials are discharged at the upper end of the bucket, and foreign matter and light substances are separated by water at the lower end of the bucket.
