According to our (Global Info Research) latest study, the global Logarithmic RF Power Detectors market size was valued at US$ 169 million in 2025 and is forecast to a readjusted size of US$ 228 million by 2032 with a CAGR of 4.4% during review period.

Log Average Power Detectors are devices used to measure and monitor the average power of a signal over a logarithmic scale. These detectors are particularly useful in applications where the signal varies widely in amplitude, such as in wireless communication systems, RF circuits, and signal processing. By providing a logarithmic response, they enable accurate power measurements across a broad dynamic range, ensuring reliable performance in environments with fluctuating signal strengths.
