The logging grab is an accessory used for forestry machinery such as excavators, loaders, and cargo trucks to grab and move logs and other heavy wood. The grab is designed with two or more arms that can be opened and closed, similar to scissors, and operated hydraulically or mechanically. The grab bucket is used to effectively move logs and timber from the cutting site to a loading area or processing facility. They can also be used to classify logs by size, type, or quality. Logging buckets are an important tool in modern forestry operations because they enable operators to handle large quantities of wood quickly and safely.
