According to our (Global Info Research) latest study, the global Logic Output Optical Isolator market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Logical output optical isolators often use light to transmit information across electrical insulation layers for security or functional reasons. They differ from other types of optical isolator products in that they contain additional output-level circuits for amplification and threshold detection to provide output signals compatible with common logical signal levels. These additional circuits require an external power supply to function properly.
