Logic Sensitive Gate Triac is a semiconductor device commonly used in switching control applications in AC circuits. A Triac (Bidirectional AC Voltage Controlled Thyristor) is a bidirectional switch that can be turned on and off in both directions and is used to control loads in AC power supplies. Logic-sensitive gate Triac is a special type of Triac whose control terminal is triggered by logic level (such as TTL or CMOS level) without high-power trigger. This makes logic-sensitive gate triacs very convenient when controlling high-power AC loads in low-power logic circuits. Logic sensitive gate Triac is usually used in applications such as lighting control, electric tools, electric furnace, electric gate, etc., and can realize precise control of AC power.
