Logistics digital twins are virtual models built using digital technologies and the Internet of Things (IoT) to depict logistics processes, transportation networks, warehousing systems, and related resources. They can reflect all aspects of logistics operations in real time, including cargo transportation, warehouse management, delivery scheduling, and inventory management. Through continuous data collection and analysis, logistics digital twins can not only monitor and optimize each link in the logistics chain in real time, but also predict potential delays or bottlenecks, optimize route planning, improve resource utilization efficiency, reduce costs, and enhance supply chain transparency and flexibility. This technology is widely used in industries such as manufacturing, retail, e-commerce, express delivery, and public transportation, aiming to improve logistics efficiency, shorten delivery times, reduce operating costs, and increase customer satisfaction.

With the rapid development of global e-commerce, smart manufacturing, and globalized trade, the logistics industry is facing unprecedented challenges and opportunities. Logistics digital twin technology, as a crucial tool for improving logistics efficiency, optimizing resource allocation, and enhancing supply chain responsiveness, is becoming a core technology for major enterprises and supply chain managers. With the continuous maturation of technologies such as IoT, big data, artificial intelligence, and automated equipment, logistics digital twins will play an even greater role in improving logistics transparency, reducing transportation costs, minimizing environmental impact,

and enhancing customer experience. Especially in emerging fields such as cross-border e-commerce, instant delivery, and autonomous logistics fleets, digital twins will bring profound changes. It is expected that in the coming years, logistics digital twin technology will become a core component of modern logistics systems and a key technology driving innovation and development in the global logistics industry.
