The global Logistics Fleet Monitoring Platform market size is expected to reach \$ 22396 million by 2032, rising at a market growth of 9.1% CAGR during the forecast period (2026-2032).

A Logistics Vehicle Telematics and Fleet Monitoring Platform is a cloud-based fleet management and connected vehicle platform used by freight carriers, express logistics companies, cold chain operators, contract logistics providers, urban delivery fleets, hazardous goods transporters and enterprise shippers. It collects vehicle and cargo-related data through GPS/GNSS devices, onboard telematics units, OBD/CAN connections, dash cameras, ADAS/DMS systems, temperature sensors, fuel sensors, tire pressure sensors, electronic locks, trailer sensors and mobile apps. The platform enables real-time vehicle tracking, trip history, geofencing, driver safety monitoring, video event management, fuel and maintenance analytics, cold chain monitoring, ETA visibility, compliance reporting, exception alerts and centralized multi-fleet operations.

Based on our research, the logistics vehicle monitoring platform market is best understood as a convergence of fleet telematics, vehicle IoT, driver safety, shipment visibility and logistics operations management. The core value of the platform has moved beyond basic GPS tracking. Modern platforms collect and analyze data from GNSS devices, onboard telematics units, OBD/CAN interfaces, dash cameras, ADAS/DMS systems, temperature sensors, trailer sensors, electronic locks and mobile driver apps. For logistics operators, the platform supports real-time vehicle location, route execution, trip history, geofencing, ETA alerts, driver behavior scoring, fuel and energy analysis, vehicle health monitoring, cold chain visibility and exception management. Therefore, this market should not be confused with a pure TMS, freight matching platform, navigation app or hardware terminal business. Its defining feature is

continuous vehicle-side and cargo-side visibility combined with cloud-based fleet management. From a supply-side perspective, the global market is led by several types of vendors. North American and European companies are strong in SaaS-based fleet management, video telematics, compliance management and real-time transportation visibility, with platforms typically sold through subscription models and integrated with carrier, shipper and enterprise systems. Chinese vendors are more closely tied to heavy-truck monitoring, road freight digitalization, cold chain monitoring, commercial vehicle video surveillance and local regulatory interfaces. In this market, hardware-software integration is common: many leading vendors provide not only software platforms but also GPS terminals, dash cameras, temperature sensors, trailer devices or onboard gateways. For this reason, qualified suppliers should include both pure SaaS vendors and hardware-bundled platform providers, as long as they offer proprietary software, cloud platforms or fleet data services rather than only selling devices. From the demand side, growth is being driven by logistics cost control, transport safety requirements, cold chain compliance, shipper demand for real-time visibility, driver shortage pressure and the need to manage distributed fleets across regions and subcontractors. Long-haul freight fleets use these platforms to monitor route compliance, idle time, fuel use and delivery exceptions; urban delivery fleets focus more on dispatch execution, vehicle utilization and delivery time windows; cold chain fleets require temperature, humidity, door-opening and compliance records; hazardous goods fleets emphasize safety, route restrictions and regulatory reporting; and large shippers increasingly want ETA visibility across multiple carriers. The strongest demand is no longer simply 'where is the vehicle,' but 'what is happening to the vehicle, cargo, driver and shipment, and what action should be taken.' From a technology roadmap perspective, the market is shifting from location tracking to intelligent fleet operations. AI dash cameras and DMS/ADAS systems are turning vehicle monitoring from post-event review into proactive risk prevention. Trailer and cargo sensors are expanding the monitored object from the truck to the shipment and transport asset. Real-time visibility platforms are extending fleet monitoring from owned vehicles to outsourced carrier networks. Electric logistics vehicles will further increase demand for battery status, charging, range, energy consumption and carbon-emission monitoring. Over the next several years, competitive advantage will depend on data scale, device connectivity, AI event recognition, API ecosystem, compliance capability, cybersecurity, and the ability to serve multi-fleet, multi-country and multi-carrier logistics operations. Vendors that rely only on low-cost GPS hardware or project-based implementation will face increasing pricing pressure, while platform providers with recurring software revenue and strong analytics capabilities are likely to gain share.

This report studies the global Logistics Fleet Monitoring Platform demand, key

companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Logistics Fleet Monitoring Platform, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Logistics Fleet Monitoring Platform that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Logistics Fleet Monitoring Platform total market, 2021-2032, (USD Million)

Global Logistics Fleet Monitoring Platform total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Logistics Fleet Monitoring Platform total market, key domestic companies, and share, (USD Million)

Global Logistics Fleet Monitoring Platform revenue by player, revenue and market share 2021-2026, (USD Million)

Global Logistics Fleet Monitoring Platform total market by Platform Function, CAGR, 2021-2032, (USD Million)

Global Logistics Fleet Monitoring Platform total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Logistics Fleet Monitoring Platform market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Geotab Inc., Samsara Inc., Verizon Connect, Motive Technologies, Inc., Trimble Inc., Webfleet Solutions B.V., Solera Holdings, LLC, Teletrac Navman, Lytx, Inc., Powerfleet, Inc., etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Logistics Fleet Monitoring Platform market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), by player, by regions, by Platform Function, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year,

and 2027-2032 as the forecast year.
