Abstracts

According to our latest research, the global Long Duration Energy Storage (LDES) Solutions market size will reach USD 14280 million in 2031, growing at a CAGR of 8.6% over the analysis period.

Long Duration Energy Storage (LDES) refers to a range of energy storage systems capable of storing and discharging electricity for extended periods—typically from 8 to over 100 hours—far beyond the capabilities of conventional lithium-ion batteries. Designed to balance intermittent renewable energy sources like solar and wind, LDES technologies help stabilize the grid, ensure energy availability during prolonged outages or demand peaks, and enable deeper decarbonization. These systems include mechanical (e.g., pumped hydro, compressed air), electrochemical (e.g., flow batteries, metal-air), thermal (e.g., molten salt, sand), and emerging chemical storage methods (e.g., hydrogen). LDES is critical for enabling a reliable, flexible, and sustainable future energy infrastructure.
