## Abstracts

The global Long Glass Fiber Reinforced PBT market size is expected to reach \$ 1932 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

Global sales of long glass fiber reinforced PBT reached 320,000 tons in 2025, with an average price of US\$3,524 per ton.

Long glass fiber reinforced PBT (LFT-PBT) is produced by thoroughly impregnating continuous glass fiber rovings with PBT melt during pultrusion or in-line compounding processes, followed by pelletizing into 5?25 mm pellets. This process maintains a high aspect ratio in injection-molded parts, giving the material higher rigidity, creep resistance, and impact toughness, making it suitable for load-b

On the raw material side, PBT resin accounts for 55-65% of the formulation mass, corresponding to 60-70% of the cost. Its monomers, terephthalic acid and butanediol, are both derived from petrochemical routes, with prices fluctuating with the crude oil-PTA chain. Continuous alkali-free glass fiber accounts for 30-40%, representing 20-25% of the cost. It is made by melting and drawing quartz sand and limestone, then coating it with a coupling agent, resulting in high energy consumption and sensitivity to natural gas prices. The remaining approximately 5% consists of transesterification inhibitors, heat stabilizers, and other additives. Overall, raw material costs account for 75-80% of the ex-factory price, making PBT resin market conditions the primary driver of cost fluctuations.
