According to our (Global Info Research) latest study, the global Long Glass Fiber Reinforced PP for Automotive Front-End Modules market size was valued at US\$ 421 million in 2025 and is forecast to a readjusted size of US\$ 647 million by 2032 with a CAGR of 6.5% during review period.

Long Glass Fiber Reinforced Polypropylene (LGFPP) for automotive front-end modules is a specialized engineering composite material produced by blending polypropylene plastic with long glass fibers (typically 10 to 25 millimeters in length). It serves as one of the core materials driving automotive lightweighting initiatives and facilitating the 'substitution of steel with plastics.'

The upstream segment of this industry primarily encompasses polypropylene resins, glass fibers, coupling agents/compatibilizers, processing aids, color masterbatches, and LFT impregnation and granulation equipment. The midstream segment involves long glass fiber impregnation, pelletizing, the development of modified formulations, injection molding, and composite molding techniques incorporating metal inserts or localized continuous fiber reinforcement. The downstream segment is primarily focused on automotive front-end module components, where the material is utilized to replace certain metal structural parts, thereby achieving lightweighting, functional integration, and simplified assembly.

By 2025, global sales volume is projected to reach approximately 102,000 tons, with a global average price ranging from \$3,800 to \$4,200 per ton; leading manufacturers in

the sector are expected to maintain gross margins between 25% and 38%.
