## Abstracts

According to our (Global Info Research) latest study, the global Long Neutron Counter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Long neutron counter is a device used to detect and measure the number of neutrons in a sample. Neutron is a subatomic particle without charge, usually produced in nuclear reaction. Long neutron counters typically consist of a long cylindrical tube filled with neutron sensitive materials such as helium-3 gas and a data acquisition system. When a neutron enters the pipeline, it interacts with the material, producing an explosion of charged particles that are detected by the data collection system. The number of detected particles is proportional to the number of neutrons in the sample.
