According to our (Global Info Research) latest study, the global Long Shaft Centrifugal Pumps market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Long Shaft Centrifugal Pump is a centrifugal water pump, which is characterized by a long axis and is usually used to handle liquids or media that require large flow and high lift. In long-shaft centrifugal pumps, the motor and pump impellers are usually located in different positions and are driven by a long-shaft connection. Long-axis centrifugal pumps are usually suitable for situations where media such as deep well water, river water or sea water need to be pumped. Due to the long shaft design, this type of pump can handle larger flows and higher heads while achieving higher efficiency and more reliable operation. Long-axis centrifugal pumps are also usually made of corrosion-resistant materials to adapt to the requirements of various media.

Currently, the typical models of Long Shaft Centrifugal Pump include Grundfos's NKG series, etc.
