Abstracts

The global Long Term Care Pharmacy Software market size is expected to reach \$ 783 million by 2032, rising at a market growth of 6.5% CAGR during the forecast period (2026-2032).

Long term care pharmacy software is a specialized information system designed specifically to serve pharmacies catering to nursing homes, care facilities, rehabilitation centers, hospice agencies, and patients receiving long-term care in their own homes. Its core functionalities encompass prescription intake and verification, medication dispensing management, medication record tracking, insurance billing and reimbursement, clinical decision support, pharmaceutical inventory control, and regulatory compliance reporting. The system aims to ensure that patients with chronic conditions or disabilities receive pharmaceutical services within a long-term care setting that are safe, continuous, efficient, and fully compliant with regulatory requirements.

The demand for long term care pharmacy software continues to grow, primarily driven by multiple factors, including the rising demand for elderly and chronic disease care due to the accelerating aging of the global population, increasingly stringent government regulations on medication safety and medical errors, the shift of medical insurance payment systems towards value-based models requiring more precise drug management and reporting capabilities, the urgent need to improve the efficiency of collaboration between nursing facilities and pharmacies, and the upgrading of software systems driven by the widespread adoption of electronic prescriptions and the development of automated dispensing technologies. Simultaneously, the complex medication regimens, long treatment cycles, and susceptibility to adverse reactions of long-term care patients are also prompting professional pharmacies to accelerate the adoption of intelligent software to ensure medication continuity, compliance, and clinical

quality.
