Abstracts

According to our (Global Info Research) latest study, the global Long-Context Output Tokens market size was valued at US\$ 9055 million in 2025 and is forecast to a readjusted size of US\$ 48832 million by 2032 with a CAGR of 18.0% during review period.

Long-Context Output Tokens refer to the basic units (tokens) generated by a large language model during inference when the context window length is >32K tokens. Tokens are the minimal units for text processing, and output tokens are the primary metered basis for API-based charging. Long-context output tokens are widely used in document summarization, legal contract analysis, financial report interpretation, academic literature review, and codebase comprehension – enterprise scenarios requiring one-shot processing of extensive information. Unlike conventional short-text generation, long-context outputs impose much higher demands on inference latency, memory capacity, and compute cost: memory consumption of the attention mechanism grows quadratically with context length, and output generation requires frequent access to long-range historical information, making the per-token cost 3–10 times that of short-context generation. The value of studying this category lies in the fact that long-context capability has become a core competitive feature of large language models, yet its high token cost directly determines API pricing, enterprise procurement decisions, and profitability of model service providers. Therefore, clarifying the market size and growth trends of long-context output tokens is essential for AI infrastructure investment and commercial model design.

Long-context output tokens are a fundamental metered unit in AI model commercialization, turning vast text, code, or data into deep analysis in a single pass.

API pricing in this space has been completely reshaped. DeepSeek-V4-Flash leads the market with a “dumping” price of 2 RMB per million output tokens (about \$0.28), while the second cheapest, Gemini 2.5 Flash, remains at \$2.50 – a nearly ninefold gap. Reasoning models show a similar divide: DeepSeek R1 at \$0.42 per million output tokens versus OpenAI o3 at \$8, which is known for its agentic capabilities. Alibaba Cloud Qwen3.5-Plus is priced at 4.8 RMB (?\$0.67), and Tencent Hunyuan Hy3 at 8 RMB per million output tokens. On margins, leading Western vendors like OpenAI and Anthropic maintain 65–80% gross margins due to brand strength and ecosystem lock-in; cloud-hosted platforms (Azure, AWS Bedrock) earn 20–30% margins by reselling APIs; aggregators rely on value-added services such as unified billing and multi-model routing. Downstream primary applications: enterprise document processing (legal contracts, financial reports) accounts for roughly 35–40% of long-context output demand, code repository understanding 25–30%, academic literature review 15–20%, long-memory conversational agents 10–15%, others 5%. Incremental demand comes from three drivers: (i) enterprise RAG shifting from “retrieve-then-concatenate” to full-context ingestion; (ii) AI coding assistants expanding from single-file to whole-repository analysis; (iii) emerging demand for long-video understanding in multimodal models. The market landscape: DeepSeek’s “dumping” pricing triggered a price war, quickly followed by domestic players such as Alibaba Qwen and ByteDance Doubao, forcing OpenAI and Anthropic to gradually lower prices for their flagship products. Uncertainties include: breakthroughs in KV cache compression could further reduce inference costs; EU AI Act restrictions on US model vendors could create opportunities for non-US players; and enterprise skepticism about whether “longer is truly better” – if hallucination rates rise with context length, users may revert to traditional RAG rather than blindly pursuing longer windows. Conclusion: The long-context output token market is undergoing a price?war?driven rapid expansion, driven by falling inference costs and the unlocking of new enterprise use cases. Structural features include aggressive “dumping” pricing capturing market share, multi?tiered pricing strategies, and aggregators reshaping distribution channels. Over the next three years, players that master cost?effective long?context compression will dominate, while those relying solely on brand premium will face share erosion.
