A loose bulk density tester is a device used to measure the density of powders or granules in their loose state. It typically consists of a container, a compactor, and a weighing system. By filling the container with the sample, compacting it, and then measuring the total mass and volume of the container and sample, the loose bulk density of the sample can be calculated. This instrument is widely used in industries such as chemicals, pharmaceuticals, and food for quality control and product development.
