A Loose Dryer for Textile Printing and Dyeing is a specialized drying and finishing machine designed for the textile industry to handle printed fabrics, dyed cloths, and greige goods during the production process. This equipment uses a conveyor or mesh belt to carry textile materials in a loosely spread formation through the drying zone, where controlled hot air circulation or infrared heating effectively removes moisture, dye residues, and finishing agents while preserving fabric texture and color uniformity. Loose dryers can be configured to meet different fabric types, dyeing techniques, drying temperatures, and production capacity requirements, making them suitable for cotton, polyester, nylon, and blended fabrics. As an essential part of modern textile finishing lines, they contribute significantly to product quality consistency and production efficiency. In 2025, global Loose Dryer for Textile Printing and Dyeing production reached approximately 365 units with an average global market price of around 349.9 k USD/unit. The production capacity for Loose Dryer for Textile Printing and Dyeing in 2025 was approximately 500 units. The typical gross profit margin for Loose Dryer for Textile Printing and Dyeing is between 20% and 40%.
