The global Loose Dryer market size is expected to reach \$ 176 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

A Loose Dryer is a type of drying equipment used for powders, granules, or loose bulk materials, operating in continuous or batch mode. It applies hot air, steam, or other heat sources to reduce the moisture content of materials while preserving particle integrity. It is widely used in chemical, food, pharmaceutical, mineral, and agricultural processing industries, suitable for drying loose granules, grains, herbs, and chemical particles. In 2025, global Loose Dryer production reached approximately 365 units with an average global market price of around 349.9 k USD/unit. The production capacity for Loose Dryer in 2025 was approximately 500 units. The typical gross profit margin for Loose Dryer is between 20% and 40%.

The Loose Dryer market is driven by increasing demand for efficient and energy-saving drying equipment in chemical, food processing, and pharmaceutical industries. With the advancement of automation and smart technologies, modern loose dryers offer higher thermal efficiency, lower energy consumption, and better material handling capabilities, leading to steady market growth. Regionally, the Asia-Pacific market is growing the fastest due to rapid industrialization and food processing expansion, while North America and Europe are characterized by advanced technology adoption and strict environmental standards.
