According to our (Global Info Research) latest study, the global Loose Tube Stranded Optical Cable market size was valued at US\$ 836 million in 2024 and is forecast to a readjusted size of USD 1169 million by 2031 with a CAGR of 4.9% during review period.

Loose tube stranded optical cable is a cable structure consisting of multiple loose sleeves twisted helically around a central strength member. There is a certain movable space between the loose tube and the inner fiber, so that the fiber can move freely within a certain range, thus effectively reducing the influence of external stress on the fiber. In addition, the outer layer of the optical cable is usually wrapped with a jacket material to provide additional physical protection.
