According to our (Global Info Research) latest study, the global Loquat Fruit Powder market size was valued at US\$ 9.91 million in 2025 and is forecast to a readjusted size of US\$ 14.34 million by 2032 with a CAGR of 5.4% during review period.

Loquat Fruit Powder is a fruit-based, water-dispersible ingredient made primarily from the edible fruit of loquat (*Eriobotrya japonica*). In commercial use, it is positioned as a natural fruit ingredient that contributes loquat's characteristic sweet, floral-fruity aroma with a mild tart note, along with fruit-derived soluble solids and naturally occurring fruit components (the exact retention depends on the product specification).

Upstream, the core raw material is ripe loquat fruit. Depending on the product positioning, manufacturers may start from different fruit fractions such as whole fruit, peeled fruit/pulp, fruit puree, or loquat juice/juice concentrate as the feedstock, and sometimes select specific cultivars or maturity grades to target flavor intensity, color tone, or solids content. From a sourcing perspective, seasonality, fruit quality (ripeness, sugar/acid balance), and supply-chain hygiene are key determinants of a stable powder specification.

Downstream, loquat fruit powder is commonly supplied to food and nutrition manufacturers for functional beverages and drink mixes (instant powders, stick packs), dairy and dessert formulations (yogurt, ice cream, fillings), and bakery/confectionery applications where a gentle loquat flavor is desired. It is also used in dietary supplement formats (powders, tablets, capsules) as a fruit-based ingredient, and can be incorporated into broader fruit preparations and compounded flavor systems.

In 2025, global sales of Loquat Fruit Powder reached approximately 566 tons, with an average global market price of around US\$ 17/kg. The gross profit margin is approximately 20%-40%.
