According to our (Global Info Research) latest study, the global Low Alkaline Calcium Petroleum Sulfonate market size was valued at US\$ 391 million in 2025 and is forecast to a readjusted size of US\$ 533 million by 2032 with a CAGR of 4.6% during review period.

Low-alkaline calcium petroleum sulfonate is an important lubricant additive. Extracted from petroleum, it possesses excellent high-temperature detergency, dispersancy, and rust prevention properties. It effectively neutralizes acidic substances produced by the engine, prevents the formation of sludge and carbon deposits, keeps the engine clean, and provides protection to metal surfaces.

The main upstream raw materials are petroleum sulfonic acid and calcium oxide. Petroleum sulfonic acid is usually extracted from the by-product (acid sludge) generated during the refining of high-viscosity lubricating oil fractions, or produced through the sulfonation of specific petroleum fractions.

Global sales are projected to reach approximately 100,000 tons in 2025, with an average market price of approximately US\$3,860 per ton. The industry's gross profit margin is approximately 10-25%.
