## Abstracts

The global Low Altitude Economic Product market size is expected to reach \$ 48732 million by 2032, rising at a market growth of 20.1% CAGR during the forecast period (2026-2032).

Low Altitude Economic Products refer to complete aircraft systems operating in low-altitude airspace (typically below 1,000 meters), mainly including civilian/commercial drones, eVTOL aircraft, and civil/commercial helicopters. These products are widely used in aerial imaging, agricultural spraying, inspection and surveillance, emergency response, logistics delivery, tourism, and short-range passenger transportation. The industry chain of low altitude economic products consists of upstream core components such as aerospace materials, batteries, motors, control systems, and sensors, midstream aircraft manufacturing and system integration, and downstream multi-scenario applications across agriculture, energy, public safety, transportation, and consumer sectors.

The gradual opening of low-altitude airspace and the improvement of regulatory frameworks are the primary drivers of this market, enabling continuous expansion of commercial application scenarios for drones and new aircraft. Meanwhile, increasing demand for cost reduction and operational efficiency in sectors such as agriculture, energy, power inspection, and public safety is accelerating the replacement of manual operations with aerial systems. In addition, ongoing advancements in electrification and intelligent technologies are lowering adoption barriers and enhancing operational safety, enabling broader deployment, while emerging use cases such as urban air mobility (UAM) and aerial logistics are further unlocking long-term growth potential.
