According to our (Global Info Research) latest study, the global Low Altitude Lighting market size was valued at US\$ 1564 million in 2024 and is forecast to a readjusted size of USD 3736 million by 2031 with a CAGR of 14.9% during review period.

Low-altitude lighting refers to the technology or system that provides artificial lighting for airspace close to the ground (usually below 500 meters), mainly used to ensure low-altitude flight safety, urban landscaping, emergency rescue, night operations and other scenarios. Its core purpose is to provide visibility support for low-altitude activities such as drones, helicopters, and urban air traffic (UAM) at night or under low visibility conditions. There are many types of low-altitude lighting products, including key lighting systems for the safe and efficient operation of general aviation airports, helicopter and drone take-off and landing points, flight areas and related areas, involving apron lighting, runway lights, taxiway lights, approach lights, sequential approach lights, clearance lights, high pole lights, runway marker lights and other products as well as lighting control systems.
