Abstracts

According to our (Global Info Research) latest study, the global Low-Altitude Network with Communication Perception Integration market size was valued at US\$ 613 million in 2025 and is forecast to a readjusted size of US\$ 2085 million by 2032 with a CAGR of 19.8% during review period.

Synesthesia integration, also called communication perception integration, is a new capability of 5G-A. While the base station provides cellular mobile communication capabilities, it also superimposes radar-like functions (perception capabilities) to support applications in low-altitude fields, including unmanned aerial vehicles. Aircraft distribution, inspection, sea area monitoring, airport security management, etc.

Communication, Sensing, and Navigation Will Become More Integrated

Future low-altitude networks will increasingly combine communication, sensing, navigation, and management functions into unified platforms. This will allow drones, eVTOLs, and low-altitude aircraft to share the same network for positioning, traffic monitoring, collision avoidance, and route planning.

5G-A, 6G, and Satellite Networks Will Be More Deeply Combined

Low-altitude networks will increasingly rely on 5G-Advanced, future 6G technologies, and satellite-terrestrial integrated networks to provide wider coverage, lower latency, and more stable connections for low-altitude aircraft operations.

AI and Digital Twin Technologies Will Play a Larger Role

AI, digital twins, and cloud-edge computing will become core technologies for low-altitude communication-perception integration networks. These technologies can support real-time route optimization, traffic forecasting, anomaly detection, emergency response, and intelligent scheduling.

Security, Authentication, and Anti-interference Capabilities Will Become More Important

As more drones and eVTOLs enter low-altitude airspace, future networks will place greater emphasis on cybersecurity, remote identification, trust authentication, encrypted communication, and anti-jamming capabilities.

Commercial Applications Will Expand Rapidly

Low-altitude communication-perception integration networks will increasingly be used in drone logistics, urban air mobility, emergency rescue, industrial inspection, agriculture, and smart city operations. The market is expected to maintain a high growth rate in the coming years.
