The global Low-Code Machine Learning Platforms Software market size is expected to reach \$ 9973 million by 2032, rising at a market growth of 20.0% CAGR during the forecast period (2026-2032).

Low-code machine learning platform software is a type of AI development and application platform that lowers the barrier to entry for machine learning modeling through visual drag-and-drop, pre-built components, automated processes, and minimal coding. It enables non-professional algorithm engineers to quickly complete the entire process of data access, feature engineering, model training, evaluation, deployment, and maintenance.

The core goals of low-code machine learning platform software are to lower the AI technical threshold, shorten the modeling cycle, and enhance the self-modeling capabilities of business personnel.

The core features of low-code machine learning platform software include visual modeling, automated AI capabilities, low-code/no-code functionality, full-process coverage, and out-of-the-box components.
