According to our (Global Info Research) latest study, the global Low-Code Machine Learning Platforms Software market size was valued at US\$ 2758 million in 2025 and is forecast to a readjusted size of US\$ 9973 million by 2032 with a CAGR of 20.0% during review period.

Low-code machine learning platform software is a type of AI development and application platform that lowers the barrier to entry for machine learning modeling through visual drag-and-drop, pre-built components, automated processes, and minimal coding. It enables non-professional algorithm engineers to quickly complete the entire process of data access, feature engineering, model training, evaluation, deployment, and maintenance.

The core goals of low-code machine learning platform software are to lower the AI technical threshold, shorten the modeling cycle, and enhance the self-modeling capabilities of business personnel.

The core features of low-code machine learning platform software include visual modeling, automated AI capabilities, low-code/no-code functionality, full-process coverage, and out-of-the-box components.
