Low-code is a method of designing and developing applications using intuitive graphical tools and embedded functionalities that reduce traditional – or pro-code –writing requirements. Pro-code writing is still part of the development process, but low-code development offers an augmented and simplified experience to help users start creating quickly. No-code is a method that benefits from a similar user experience as low-code, but goes the extra mile by allowing non-technical business users to develop applications without having to write even a single line of code. Low-code development platforms (LCDPs) and no-code development platforms (NCDPs) are based on the principles of model-driven design, automatic code generation, and visual programming. These platforms are intentionally designed to target users that are familiar with processes and workflows within their business department, regardless of their coding experience.
