The global Low Density Fiberboard (LDF) market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Low-density fibreboard (LDF) LDF as it is aptly named is a composite wood material with a lower density ranging from 35g/cm 3 to 5g/cm 3. For most CNC applications, it is considered the better spoilboard option because its lighter weight and density allow for better suction between the board and the vacuum beneath the table.
