Abstracts

According to our (Global Info Research) latest study, the global Low Density Polyethylene Tubing market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Low Density Polyethylene Tubing is made of low density polyethylene material. Polyethylene with a relative density of 0.910-0.925 is called low density polyethylene, while polyethylene with a density between low density and high density is called medium density polyethylene. On the contrary, the relative density of polyethylene is lower than 0.910; It has also come out and become very low density polyethylene, and there is even a relative density of less than 0.900, which is also called ultra-low density polyethylene abroad. Compared with medium density, high density polyethylene, it has lower crystallinity and softening point, has better softness, elongation, electrical insulation, transparency, and higher impact strength. Low density polyethylene has poor mechanical strength, poor heat resistance, and another obvious weakness is poor resistance to environmental stress cracking. Low density polyethylene is mostly used for film products, and most of the film products are used for packaging. The other part is used for agricultural film and building film. Low density polyethylene packaging film can be used for candy, vegetables, frozen food and other food packaging, can also be used as a lining film, shrink packaging film, elastic packaging film, heavy packaging film and other non-food packaging film.
