## Abstracts

According to our (Global Info Research) latest study, the global Low-Dielectric Modified PPE Resin market size was valued at US\$ 426 million in 2025 and is forecast to a readjusted size of US\$ 1299 million by 2032 with a CAGR of 13.6% during review period.

Low-Dielectric Modified PPE Resin is an electronic-grade polyphenylene ether resin derived from PPE/PPO, chemically modified or end-group copolymerized to achieve high purity and superior electronic performance. It features low dielectric constant, low dissipation factor, minimal metal impurities, and high thermal stability, making it suitable for high-speed PCB, HDI boards, AI server boards, and power electronics modules. End-group modification, low molecular weight control, or copolymerization optimizes flowability, composite compatibility, and curing performance while maintaining electronic-grade properties, ensuring stable high-frequency signal transmission and reliability under high-temperature processing. In 2025, global shipments of Low-Dielectric Modified PPE Resin were approximately 3,625 tons, with a unit price of approximately US\$114,200 per ton and a gross profit margin of approximately 58%-70%.

**Supply and Demand Status:** Global Low-Dielectric Modified PPE Resin production capacity is highly concentrated, with a few international leaders such as SABIC long monopolizing the high-end market. Supply is significantly less than demand, resulting in a structural shortage in the market. Domestic companies such as Shengquan Group and Dongcai Technology are rapidly deploying thousand-ton-level production lines, but overall supply remains tight.

**Future Demand Explosion:** With the rapid growth of AI servers, high-frequency PCBs,

5G/6G communication equipment, and new energy vehicle electronic modules, the market demand for low-dielectric modified polyphenylene ether is expected to increase significantly between 2025 and 2032.

**Market Structure:** SABIC maintains its technological and brand leadership, holding the highest global market share. Domestic companies, through the construction of thousand-ton-level production lines and joint development with downstream customers, are expected to occupy approximately 65-70% of global Low-Dielectric Modified PPO production capacity in the short term, demonstrating a clear trend towards domestic production. The overall industry presents a pattern of 'high prices, low volume, supply falling short of demand, and rapid domestic catching up.'

**Price and Gross Profit:** Low-Dielectric Modified PPE Resin has a selling price of approximately RMB 700,000–1,200,000 per ton, with a gross profit margin as high as 58%–70%, exhibiting typical characteristics of high-end specialty plastics.
