Abstracts

The global Low Dk-Df Epoxy Resin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Low Dk/Df DCPD Epoxy Resin refers to a type of epoxy resin that has low dielectric constant (Dk) and low dissipation factor (Df). Dk is a measure of the ability of a material to store electrical energy in an electric field, while Df represents the energy loss in the material when subjected to an alternating electric field. DCPD stands for Dicyclopentadiene, which is a cyclic hydrocarbon compound commonly used as a reactive diluent in epoxy resin formulations. It helps to reduce the viscosity of the resin and improve its processability. Low Dk/Df DCPD Epoxy Resin is widely used in electronic packaging and high-frequency circuit applications where low signal loss and high electrical performance are required. It offers excellent electrical insulation properties, good mechanical strength, and chemical resistance.

This type of epoxy resin is often used in the manufacturing of printed circuit boards (PCBs), integrated circuits (ICs), and other electronic components.
