Abstracts

The global Low-Dk / Low-Df Resins market size is expected to reach \$ 4203 million by 2032, rising at a market growth of 11.0% CAGR during the forecast period (2026-2032).

Low-Dk / low-Df resins are resins and composite materials with low dielectric constant and low dielectric loss, mainly used in high-speed and high-frequency PCBs, IC substrates, antennas, connectors and electronic packaging. These materials reduce signal transmission loss, crosstalk and delay while improving the stability of high-speed electronic systems. In 2025, global Low-Dk / Low-Df Resins production reached approximately 262 K MT.

AI servers, 800G/1.6T communications, 5G-Advanced, millimeter-wave radar and advanced packaging are increasing demand for low-loss materials in high-speed interconnects. Customers focus not only on Dk and Df values, but also on thermal expansion, water absorption, copper-foil roughness compatibility, processing latitude and long-term reliability. Qualification usually requires coordination among laminate makers, PCB fabs and end-equipment companies.

Growth will concentrate in high-end laminates, IC substrates and high-frequency RF materials. Traditional epoxy systems will retain cost advantages in mid-range applications, while hydrocarbon, PPE, PTFE, LCP and modified polyimide systems will expand in high-speed and high-frequency scenarios. Companies with resin synthesis, filler dispersion and lamination-process experience will be more competitive.

This report studies the global Low-Dk / Low-Df Resins production, demand, key manufacturers, and key regions.
