## Abstracts

According to our (Global Info Research) latest study, the global Low Earth Orbit Communication Satellite market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

According to the height of the satellite orbit, communication satellites can be divided into low-orbit communication satellites (LEO), medium-orbit communication satellites (MEO) and high-orbit geosynchronous communication satellites (GEO). The orbit height of LEO satellites is 500km~2000km. The advantage of low orbit is that on the one hand, the orbit height of the satellite is low, which makes the transmission delay short and the path loss is small. The constellation composed of multiple satellites can achieve true global coverage and frequency reuse. More effective; on the other hand, technologies such as cellular communication, multiple access, spot beam, and frequency multiplexing also provide technical support for low-orbit satellite mobile communications. Therefore, the LEO system is considered to be one of the most promising satellite mobile communication technologies.
