According to our (Global Info Research) latest study, the global Low Earth Orbit Satellite Internet Service market size was valued at USD 4550 million in 2023 and is forecast to a readjusted size of USD 12120 million by 2030 with a CAGR of 15.0% during review period.

Low-orbit satellite Internet service is a service that uses a low-orbit satellite network to provide global Internet connectivity. By deploying a large number of low-orbit satellites in Earth orbit, these services aim to provide high-speed, reliable, global coverage Internet services, especially in remote areas and areas beyond the reach of traditional Internet infrastructure.

Low-orbit satellite Internet services deploy hundreds to thousands of low-orbit satellites to divide the global coverage area into multiple satellite clusters to achieve sustained, high-density Internet coverage. Compared with traditional ground infrastructure, low-orbit satellite Internet services have global coverage capabilities, and users can receive signals whether on land, sea, or air. As services develop, the research and development of a new generation of user terminal equipment will become even more important to accommodate high-speed, low-latency Internet connections. Overall, low-orbit satellite Internet services provide a new model of Internet connectivity on a global scale and have a potentially important impact on improving global Internet accessibility and coverage.
