According to our (Global Info Research) latest study, the global Low Jack market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A low jack is a type of 'floor jack' mainly used for automobile maintenance. It is used for vehicles that have been modified to lower the vehicle height, such as lowered cars, sports cars, and cars with external aero parts installed, where the gap between the ground and the vehicle body is small and the jack-up point is difficult to access. The arm part designed for lifting the car body is typically made flat. This design allows the jack to easily enter the gap even when the car height is low, and the space between the ground and the car body is limited. While it is easier to jack up a vehicle in a more secluded location than a standard floor jack, the maximum height when jacking up is lower due to the flat arm.
